ACCESSION NUMBER: 1973:462203 CAPLUS

DOCUMENT NUMBER: 79:62203

TITLE: Effect of BHA (butylated hydroxyanisole), BHT (butylated hydroxytoluene), and NDGA (nordihydroguaiaretic acid) on hemolysis and blood clotting in rats

AUTHOR(S): Kwast, Michal

CORPORATE SOURCE: Zakl. Badania Zywn. Przedmiotow Uzytku, Panstw. Zakl. Hig., Warsaw, Pol.

SOURCE: Roczniki Panstwowego Zakladu Higieny (1973), 24(2), 169-73

CODEN: RPZHAW; ISSN: 0035-7715

DOCUMENT TYPE: Journal

LANGUAGE: Polish

AB Butylated hydroxyanisole [25013-16-5], butylated hydroxytoluene [128-37-0], and nordihydroguaiaretic acid (I) [500-38-9], administered to rats orally at 50% of their LD50 values increased hematocrits and hemoglobin levels on the first day. On the third day after treatment both blood parameters returned to normal. No other effects on blood clotting or constituents were observed. In vitro, all 3 compds. induced red blood cell hemolysis. I showed the strongest activity, causing 100% hemolysis within 45 min when added to the blood cell suspensions at 10-4M.

TITLE: Inhibition of electron and energy transfer in rat liver mitochondria by nordihydroguaiaretic acid

AUTHOR(S): Bhuvaneswaran, C.; Dakshinamurti, K.

CORPORATE SOURCE: Fac. Med., Univ. Manitoba, Winnipeg, MB, Can.

SOURCE: Biochemistry (1972), 11(1), 85-91

CODEN: BICHAW; ISSN: 0006-2960

DOCUMENT TYPE: Journal

LANGUAGE: English

AB Nordihydroguaiaretic acid (I) [500-38-9] effectively inhibited rat liver mitochondrial respiration associated with NAD-linked substrates in vitro. I inhibited both electron and energy transfer in mitochondria, as indicated by the partial release of I inhibition by dinitrophenol [51-28-5], inhibition by I of succinate-linked reduction of acetoacetate [541-50-4], and inhibition of energy-linked mitochondrial swelling. I inhibition was reversed by treating the mitochondria with bovine serum albumin, but not by washing with sucrose solution. The addition of I to mitochondria oxidizing NAD-linked substrates at state 3 shifted the redox level of cytochrome b to the oxidized state and that of the pyridine

nucleotide to a more reduced state. The effects of I may involve a lipid component in the respiratory chain.

AB Of the 14 compds. tested at concns. of 5 .tim. 10⁻⁵ or 5 .tim. 10⁻⁴M, the strongest inhibitors of rat cerebral tryptophan hydroxylase in vitro were 2,3,4-trihydroxyacetophenone (I) [528-21-2], 3-(1-naphthyl)alanine [7758-42-1], and NDGA (II) [500-38-9]. I, II, and RO 4-4602 (III) [322-35-0] (each at 5 .tim. 10⁻⁵M) inhibited 5-hydroxytryptophan decarboxylase in vitro by >50%.

AB Supplements were added (in g./100 g. diet) for 4-6 weeks, to a basal diet fed in restricted quantities to month old male Wistar hooded rats. Quillaja saponin (I) (2-3) and saponin white (3) depressed rate of weight gain. I (2) did not affect utilization of ergocalciferol. The depression by I was specifically reversed by cholesterol (1-3) but not by β -sitosterol (3). Cholesterol (1-3) also retarded weight gain. Linoleic acid when esterified or protected by an antioxidant increased the rate of gain. The free acid or choline had no effect. Nordihydroguaiaretic acid appeared to have a stimulatory effect, sep. from its antioxidant role but α -tocopherol did not.

L6 ANSWER 21 OF 28 CAPLUS COPYRIGHT 2007 ACS on STN

ACCESSION NUMBER: 1984:133334 CAPLUS

DOCUMENT NUMBER: 100:133334

TITLE: Possible involvement of lipoxygenase products of arachidonic acid pathway in ovulation

AUTHOR(S): Reich, R.; Kohen, F.; Naor, Z.; Tsafiriri, A.

CORPORATE SOURCE: Dep. Horm. Res., Weizmann Inst. Sci., Rehovot, 76100, Israel

SOURCE: Prostaglandins (1983), 26(6), 1011-20

CODEN: PRGLBA; ISSN: 0090-6980

DOCUMENT TYPE: Journal

LANGUAGE: English

AB The possible involvement of products of the lipoxygenase pathway of arachidonic acid [506-32-1] cascade in ovulation in the rat was tested by intrabursal injection of nordihydroguaiaretic acid (NDGA) [500-38-9], 5,8,11-eicosatriynoic acid [13488-22-7], 3-amino-1-(3-trifluoromethylphenyl)-2-pyrazoline hydrochloride

[66000-40-6], and FPL 55712 [40786-08-1]. All these drugs reduced the number of ova released from the treated ovaries in a dose-dependent manner, without affecting ovulation from contralateral ovaries. NDGA was the most potent inhibitor, and its effect cannot be ascribed to its inhibition of ovarian prostaglandin E synthesis. Conversion of labeled arachidonic acid via the lipoxygenase pathway by preovulatory rat follicles was demonstrated by TLC. These results suggest the involvement of products of the lipoxygenase pathway of arachidonic acid in ovulation in the rat.

L6 ANSWER 22 OF 28 CAPLUS COPYRIGHT 2007 ACS on STN

ACCESSION NUMBER: 1984:18144 CAPLUS

DOCUMENT NUMBER: 100:18144

TITLE: Modulation of insulin secretion by lipoxygenase products of arachidonic acid. Relation to lipoxygenase activity of pancreatic islets

AUTHOR(S): Yamamoto, Satoshi; Ishii, Miki; Nakadate, Teruo; Nakaki, Toshio; Kato, Ryuichi

CORPORATE SOURCE: Sch. Med., Keio Univ., Tokyo, 160, Japan

SOURCE: Journal of Biological Chemistry (1983), 258(20), 12149-52

CODEN: JBCHA3; ISSN: 0021-9258

DOCUMENT TYPE: Journal

LANGUAGE: English

AB Glucose [50-99-7] (16.7 mM)-induced insulin [9004-10-8] secretion from isolated pancreatic islets of rats was inhibited by nordihydroguaiaretic acid (NDGA) [500-38-9], 1-phenyl-3-pyrazolidinone (phenidone) [92-43-3], 3-amino-1-[3-(trifluoromethyl)phenyl]-2-pyrazoline (BW755C) [66000-40-6], 2,3,5-trimethyl-6-(12-hydroxy-5,10-dodecadienyl)-1,4-benzoquinone [80809-73-0], and 2,6-di-tert-butyl-4-methylphenol [128-37-0]. Indomethacin [53-86-1] and aspirin [50-78-2], however, failed to inhibit the glucose-induced insulin secretion but rather tended to enhance it. The glucose-induced insulin secretion was inhibited by 15-hydroxy-5,8,11,13-eicosatetraenoic acid (15-HETE) [73945-47-8] (50 μ M), 15-hydroperoxy-5,8,11,13-eicosatetraenoic acid (15-HPETE) [67675-14-3] (100 μ M), and 12-hydroxy-5,8,10,14-eicosatetraenoic acid (12-HETE) [59985-28-3] (100 μ M), but not by 5-hydroxy-6,8,11,14-eicosatetraenoic acid (5-HETE) [72255-35-7] (100 μ M). Exogenous 5-HETE (10 μ M) induced insulin secretion in a low glucose (3.3 mM) medium. (\pm)-5-HETE [73307-52-5] also showed insulinotropic effect in a concentration-dependent manner with the concns. 20 μ M or above, whereas 12-HETE, 15-HETE, 15-HPETE, 5,12-dihydroxy-6,8,10,14-eicosatetraenoic acid [71160-24-2], 5-hydroxy-6-glutathionyl-7,9,11,14-eicosatetraenoic acid [72025-60-6], 5-hydroxy-6-cysteinylglycinyl-7,9,11,14-eicosatetraenoic acid [73836-78-9], PGE2 [363-24-6], and PGF2 α [551-11-1] failed to induce insulin secretion. Although insulin release was observed with arachidonic acid [506-32-1] (\geq 100 μ M), reduced cell viability was evident at 200 μ M. When the 10,000 g supernatant of isolated pancreatic islet homogenate was incubated with [3 H]arachidonic acid at 37° in the presence of GSH and Ca $^{2+}$, and the labeled metabolites then extracted with EtOAc and subjected to reversed-phase high-pressure liquid chromatog., several radioactive peaks, coeluted with authentic 15-, 12-, and 5-HETE, were observed. The radioactive peaks were completely suppressed by the addition of either NDGA, BW755C, or phenidone into the medium. Thus, the 5-lipoxygenase [80619-02-9] system may play a role in the glucose-induced insulin secretion.

L6 ANSWER 23 OF 28 CAPLUS COPYRIGHT 2007 ACS on STN

ACCESSION NUMBER: 1983:121031 CAPLUS

DOCUMENT NUMBER: 98:121031

TITLE: Inhibition of 12-O-tetradecanoylphorbol 13-acetate-induced tumor promotion by nordihydroguaiaretic acid, a lipoxygenase inhibitor, and p-bromophenacyl bromide, a phospholipase A2 inhibitor

AUTHOR(S): Nakadate, Teruo; Yamamoto, Satoshi; Iseki, Harukazu;
Sonoda, Shigeru; Takemura, Satomi; Ura, Akiko; Hosoda,
Yasuhiro; Kato, Ryuichi
CORPORATE SOURCE: Sch. Med., Keio Univ., Tokyo, 160, Japan
SOURCE: Gann (1982), 73(6), 841-3
CODEN: GANNA2; ISSN: 0016-450X
DOCUMENT TYPE: Journal
LANGUAGE: English
GI

AB nordihydroguaiaretic acid [500-38-9] And p-bromophenacyl
bromide [99-73-0] markedly suppressed skin tumor promotion induced by
12-O-tetradecanoylphorbol 13-acetate (I) [16561-29-8] in CD-1
mice. However, phenidone [92-43-3] was ineffective. Apparently,
phospholipase A2 [9001-84-7] and lipoxygenase [9029-60-1] products are
involved in the mechanism of promotion, and the dissociation of the
relationship between suppression of ornithine decarboxylase and inhibition
of tumor promotion.

ACCESSION NUMBER: 1973:487911 CAPLUS
DOCUMENT NUMBER: 79:87911
TITLE: Effects of nordihydroguaiaretic acid on rat hepatic
microsomal enzymes
AUTHOR(S): Parke, Dennis V.; Rahim, Abdur; Walker, Ronald
CORPORATE SOURCE: Dep. Biochem., Univ. Surrey, Guildford, UK
SOURCE: Biochemical Society Transactions (1973), 1(2), 511-14
CODEN: BCSTB5; ISSN: 0300-5127
DOCUMENT TYPE: Journal
LANGUAGE: English

AB The antioxidant nordihydroguaiaretic acid (I) [500-38-9] fed to
rats at a dietary concentration of 0.5% did not affect growth rate or
food intake but almost doubled liver weight after 30 days. I increased liver
concns. of microsomal protein, cytochrome P-450 [9035-51-2] and cytochrome
b5 [9035-39-6] maximally after 14-30 days, but the microsomal protein
concentration decreased to the control value after 60 days. I did not
appreciably affect the sp. activity of biphenyl 4-hydroxylase [9012-80-0]
but increased that of ethylmorphine N-demethylase [9032-78-4] up to 150%
of the control value on day 3.
